

## goNet Locker

Secure and easy management of safe deposit box systems

# goNet Locker

## The software solution for secure and simple management of safe deposit box systems

goNet Locker is a modern software system that allows you to easily manage, control, and monitor safe deposit box systems in compliance with the highest security standards. The solution can be scaled flexibly - as an autonomous single system or a networked institutional solution with 1 to 10,000 lockers per system. Specific interfaces to bank and ERP systems ensure seamless integration into existing IT infrastructures. goNet Locker is system- and manufacturer-independent and is ideal for new systems as well as for modernizing existing safe deposit box systems.

### Main Functions

#### Manage

- Simple administration of customer data, lockers, and rentals.
- Flexibly configurable for a wide range of customer requirements and systems - incl. interface to ERP systems, databases, and AD/LDAP.
- Central administration of all systems (locations) with networked institute solution.

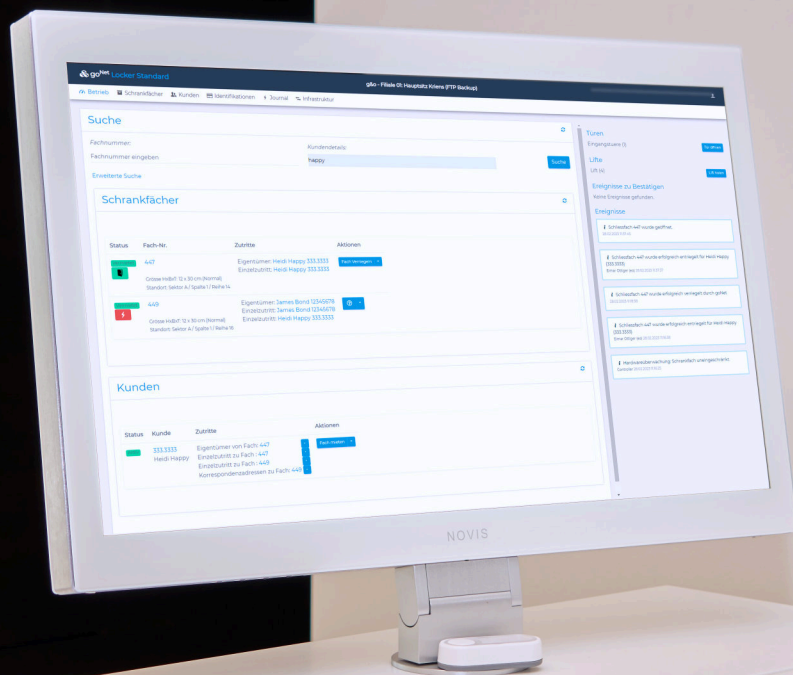

#### Control

- Access control and software-based locker release by the bank advisor or fully automated as a self-service terminal with "goNet Identification" (optional).
- Situational locking of lockers or customers.
- Easy integration of lift and door control systems.

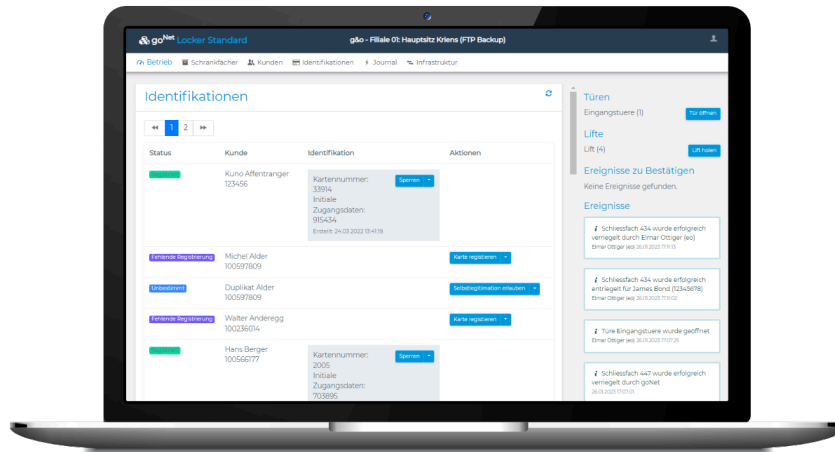

#### Monitoring

- Permanent live monitoring of current events on the user interface thanks to a dashboard with live ticker and real-time statistics.
- Audit-proof logging of all activities - including search, filter, and export functions.
- Convenient overview of all integrated systems and immediate notification of errors and alarms.

«Many thanks for the very efficient, solution-oriented, and cooperative partnership over the past few months. The result is very satisfactory. We have received very positive feedback from the sales department regarding the handling of the new system and the interface to the Finnova ERP data. This brings a noticeable increase in efficiency in the customer process. Our customers' level of self-service has increased significantly.»

Daniela Reichlin  
Head of PM Basic Products & Segment Management  
Schwyzer Kantonalbank

## Key Benefits

### Increase customer satisfaction

Customers enjoy maximum privacy and security when using the safe deposit box system. Access control and locker release are partially automated by the bank advisor or, optionally, fully automated and independently by the customer with "goNet Identification" - without waiting times at the counter.

### Increase efficiency

Thanks to the intuitive user interface, the safe deposit box system is easy to operate and can be used immediately with minimal training. The automated operation of the system significantly reduces the workload of bank advisors. The connection to ERP systems also avoids duplicate data maintenance.

### Optimize security

The multi-level security functions offer the highest possible protection against unjustified access, manipulation, and unauthorized opening of the lockers. Thanks to regular updates, safe deposit box systems with goNet are always up to date in terms of security and technology.

### Everything from a single source

Janusys supports customers throughout the entire life cycle of a safe deposit box system - from design to smooth operation as well as service, maintenance, and modernization. Service centers throughout Switzerland guarantee fast response times. Customers also benefit from short development times, as the software, electronics, and system integration are developed entirely in-house.

«I am very grateful and happy, that we have with Janusys a great and flexible integrator on our side for safe deposit box systems. Additionally to the product goNet, which runs very stable, we have with Janusys also a team that is very close to the customer and above all very flexible and dynamic on the road.

Many thanks for that!»

# Benefits & Features

## Maximum security

- Multi-level security functions offer the highest possible protection against unjustified access, manipulation, and unauthorized opening of the lockers.
- All messages and security-relevant data are cryptographically encrypted and protected against theft.

## Audit-proof logging

- All activities are logged in the central journal – with search, filter, and export functions.

## Simple, intuitive operation

- Operation on the browser-based user interface is simple and self-explanatory.

## Flexibly scalable

- goNet Locker can be scaled flexibly – as an autonomous single system or a networked institutional solution with 1 to 10'000 lockers per system.

## System- & manufacturer-independent

- All brands of locks and almost all types of lockers are supported.
- Different types of safe deposit box systems can be combined, integrated, and centrally managed.

## Modernization of existing systems

- Existing systems can be easily modernized with goNet.
- Janusys transfers existing master data, locker occupancy, and activity logs to goNet Locker.
- The uninterrupted use of the system is guaranteed during the entire migration phase.

## Modern software

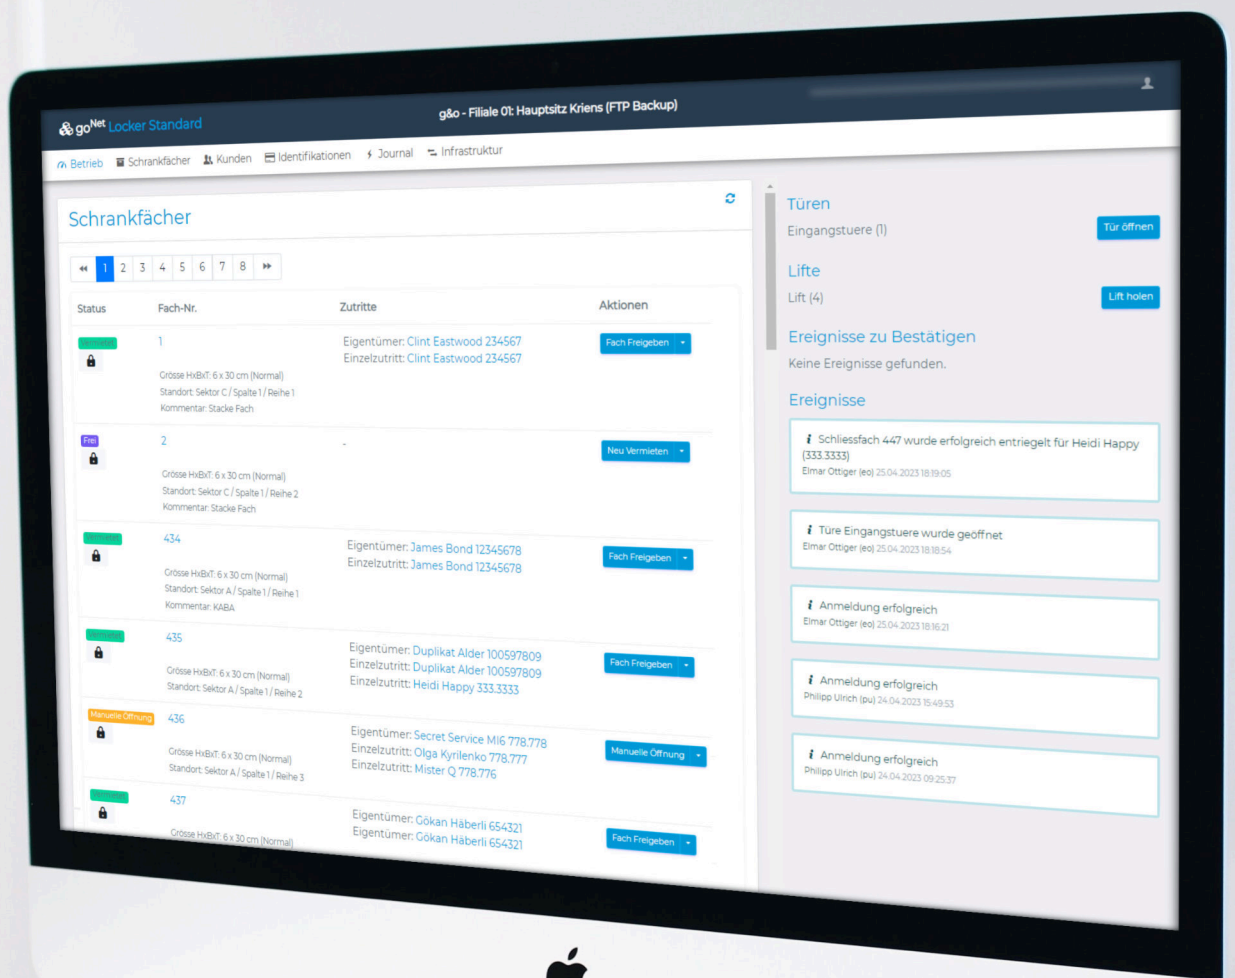

- goNet Locker is based on the latest software and web technologies and is developed entirely in-house.
- Thanks to operation via web browser, no program installation is necessary.
- Regular updates ensure that the solution is always up to date in terms of security and technology.

## Seamless IT integration

- The flexible system architecture and specific interfaces ensure seamless integration into existing infrastructures.
- Connection to ERP such as Finnova & Avaloq, central AD with LDAP authentication, and external SQL servers.
- Various backup options available.

## Partially or fully automated operation

- As standard, goNet Locker enables partially automated operation of the safe deposit box system with access control and locker release by the bank advisor.
- Optional: «goNet Identification» allows a fully automated operation using a self-service terminal with independent access control and locker release by the customer.

«The IT integration of goNet Locker into our ActiveDirectory simplifies the work of our bank advisors thanks to standardized login and password data. At the same time, this also simplifies the administration and control of user rights by our internal IT department. Thanks to the uncomplicated exchange between our specialists and the experts from Janusys, the configurations could be easily adapted to our ActiveDirectory and imported. The roll-out to our branches was completed quickly by copying the configuration.»
